PROPOSED EQUIPMENT LIST FOR ST JUDE SSANJE HEALTH CENTRE

NO.	EQUIPMENT	IMAGE	DESCRIPTION	QTY
1.	Operating Table		An operating table is required to keep the patient in place while the surgical team operates, and may move various parts of the body using surgical table accessories for easier access to the surgical site	2
2.	Surgical Lighting		A wall-mount theatre light, also known as a wall-mounted operating theatre (OT) light, is a specialized surgical lamp that is attached directly to a wall rather than a ceiling or mobile stand	3
3.	Anesthesia Unit		The anesthesia unit is used to prepare a gas mixture of precisely known, but variable composition. The gas mixture can then be delivered to a breathing system.	2
4.	Oxygen concentrators		The oxygen concentrator is required to take air from your surroundings, extract oxygen and filter it into purified oxygen for you to breathe	4

5.	Patient Monitor		A patient monitor is an electronic medical device used to continuously measure, record, and display a patient's vital signs and other important physiological data.	4
6.	Delivery Bed		Delivery bed is essential for childbirth, gynecology surgical operation, examining and many other functions, including cesarean operation	2
7.	Infant Incubator		An infant incubator is intended to provide controlled environment in an enclosed chamber to maintain appropriate temperature and humidity levels within which an infant can be cared for and kept warm	1
8.	Radiant Warmer		An infant radiant warmer is a medical device that uses an overhead infrared heating element to maintain a newborn's body temperature.	2
9.	Examination Light		Examination lights directly illuminate specific areas of a patient's body during diagnostic procedures and general examination.	2
10.	Autoclave Sterilizer		High-pressure steam unit to sterilize delivery kits and surgical instruments on-site.	1

11.	Automated Hematology Analyzer		A hematology analyzer is an automated laboratory instrument used to count and analyze blood cells, including red blood cells (RBCs), white blood cells (WBCs), and platelets	1
12.	Clinical Chemistry Analyzer		An automatic chemistry analyzer is a medical laboratory instrument that automates the biochemical analysis of biological fluids, such as blood, serum, and urine.	1
13.	Binocular Medical Microscope		High-quality LED microscope with oil immersion objectives for malaria smears, TB sputum, and urinalysis	2
14.	Laboratory Centrifuge		Benchtop electric centrifuge with variable speed controls for separating blood plasma, serum, and urine sediments	2

15.	Dental Chair Unit		Fully adjustable electric or hydraulic patient chair with an attached dentist element, spittoon, and assistant console	2
16.	Slit-Lamp Biomicroscope		Table-mounted diagnostic microscope with adjustable illumination to examine the front and back of the eye.	1
17.	Tonometer		Applanation tonometer (attached to slit lamp) or a handheld non-contact tonometer to measure intraocular pressure for glaucoma screening	1

18.	Trial Lens Set & Frame		Comprehensive case of standard corrective lenses paired with an adjustable trial frame for manual vision testing.	1
19	Ultrasound Machine		These devices are used to study a developing fetus (unborn baby), a person's abdominal and pelvic organs, muscles and tendons, or their heart and blood vessels.	1
20	Phototherapy Unit, Infant with Accessories		Phototherapy is a form of treatment that uses ultraviolet light to treat skin conditions	2

20.	Electrosurgical Unit		Used routinely in eye surgery to cut, coagulate, dissect, fulgurate, ablate and shrink tissue	1
